

WORLD Resources Institute

Guidelines for Call for Expressions of Interest Applicants: To receive training on the use of forest cover monitoring tools from World Resources Institute (WRI).

A. About Global Forest Watch

Global Forest Watch (GFW) is a free forest monitoring system that provides timely and actionable information to support the sustainable management and conservation of forest landscapes. GFW has been used by civil society organizations, journalists, communities, governments and companies around the world to see where, when and why deforestation is happening and take action to address it.

Global Forest Watch offers a suite of tools to meet the needs of a wide range of users. Using GFW's <u>interactive online platform</u>, users can visualize, analyze, and download a wide array of geospatial and statistical data related to forests, including near real-time alerts showing the precise location of recent forest disturbances. The <u>Forest Watcher mobile app</u> allows users in remote areas to access GFW data offline via their cell phone or tablet. Anyone can build a customized platform using GFW's <u>MapBuilder template</u>. GFW Pro is a management system used by companies, banks, and anyone else seeking to monitor forests across a portfolio of locations and translate geospatial data into actionable insights. <u>GFW Pro</u> enables you to securely manage deforestation risk in commodity supply chains. Since its launch in 2015, more than 3 million users have visited the GFW website from every country in the world. In addition, WRI, in collaboration with national governments, have developed a number of <u>Forest Atlases</u> that can also be used to access GLAD alerts and other forest change data.

Global Forest Watch is made possible by a growing partnership of over 200 organizations, convened by the World Resources Institute.

II. Eligibility

In order to meet WRI's requirements for eligibility, organizations or association must:

- Be legally constituted as non-profit and non-governmental, Association or civil society network.
- Be ensure that the geographic area of your NGO, Association or civil society network is in the countries listed below.

Africa

Cameroon

Democratic Republic of the Congo

III. Resources and Support

The most successful applications are those that can most clearly articulate how they will use WRI tools and how they will contribute to their ongoing work. For more information:

Visit Cameroun Forest atlas, and DRC Forest Atlas.

Visit the <u>How To</u> page for video tutorials and step by step instructions for how to analyze forest change, subscribe to alerts, submit stories and more. Read the <u>Global Forest Watch Blog</u>, including this helpful <u>post on the recent</u> <u>expansion of GLAD alerts to the entire Pantropical region.</u> Join the Global Forest Watch Discussion Forum

For questions about the application process, please refer write to $\underline{cmr@forest-atlas.org}$ or $\underline{cod@forest-atlas.org}$.
